

CYBERSECURITY AWARENESS TRAINING

Hackers are increasingly targeting small businesses and non-profits, usually through the weakest link: **your employees**. Smart business leaders know the best defense is a multi-layered approach. Even the best cybersecurity solution is useless without employee training.

Hackers are becoming more sophisticated with social engineering tools and automated ransomware campaigns. Your employees **MUST** know the tactics hackers are using so they can spot phishing attempts in order to keep your network, customer data, and intellectual property safe.

The Network Team has developed robust cybersecurity awareness training to help keep your employees vigilant against the increasing threat of cyber attacks.

Simulated Phishing Emails help you know which employees will click on things they shouldn't.

Online training helps employees learn how to spot the tactics used by hackers.

Interactive, in-person training sessions with live security expert featured on WBTV News.

TNT Cybersecurity Awareness Training

Parameters of the phishing emails are discussed during the setup of the Cybersecurity Awareness Training. After emails are sent, management receives reporting on the risk-level of employee behavior.

- 🛡️ Fixed fee per user/per month + Setup fee
- 🛡️ Setup fee waived if you sign a 3 year contract
- 🛡️ 20 User Minimum

TNT On-Site Cybersecurity Training

TNT president Jeff Gaura will come onsite to your location to administer the training. Jeff has over 10 years' experience in cybersecurity, as well as 8 years as a teacher.

- 🛡️ Maximum of 80 people
- 🛡️ Training session is an hour and a half
- 🛡️ We recommend scheduling multiple sessions throughout the day with no more than 20 people per session.
